

INSULIN & HEAT

A working hand, a hot stone and a busy muscle all speed up a recent dose.

Massage

Rubbing a recent injection site sends insulin into the blood faster

Heat

Sauna, hot stones, heat packs, hot tubs: same direction, measurable effect

Muscle

Leg exercise after a leg injection: +135% absorption in ten minutes

Do

Don't inject where you're about to be worked on. Skip recent sites and the pump site

Check

Glucose before and after — at least the first two or three sessions (FQM)

Treat

15 g fast sugar, recheck in 15 minutes. Unconscious: 911, nothing by mouth
